

ALA ELECTRONIC ACCESS STATEMENT

Access to Electronic Information, Services, and Networks: an Interpretation of the LIBRARY BILL OF RIGHTS INTRODUCTION

The world is in the midst of an electronic communications revolution. Based on its constitutional, ethical, and historical heritage, American librarianship is uniquely positioned to address the broad range of information issues being raised in this revolution. In particular, librarians address intellectual freedom from a strong ethical base and an abiding commitment to the preservation of the individual's rights.

Freedom of expression is an inalienable human right and the foundation for self-government. Freedom of expression encompasses the freedom of speech and the corollary right to receive information. These rights extend to minors as well as adults. Libraries and librarians exist to facilitate the exercise of these rights by selecting, producing, providing access to, identifying, retrieving, organizing, providing instruction in the use of, and preserving recorded expression regardless of the format or technology.

The American Library Association expresses these basic principles of librarianship in its Code of Ethics and in the Library Bill of Rights and its Interpretations. These serve to guide librarians and library governing bodies in addressing issues of intellectual freedom that arise when the library provides access to electronic information, services, and networks.

Issues arising from the still-developing technology of computer-mediated information generation, distribution, and retrieval need to be approached and regularly reviewed from a context of constitutional principles and ALA policies so that fundamental and traditional tenets of librarianship are not swept away.

Electronic information flows across boundaries and barriers despite attempts by individuals, governments, and private entities to channel or control it. Even so, many people, for reasons of technology, infrastructure, or socio-economic status do not have access to electronic information. In making decisions about how to offer access to electronic information, each library should consider its mission, goals, objectives, cooperative agreements, and the needs of the entire community it serves.

The Rights of Users

All library system and network policies, procedures or regulations relating to electronic resources and services should be scrutinized for potential violation of user rights.

User policies should be developed according to the policies and guidelines established by the American Library Association, including Guidelines for the Development and Implementation of Policies, Regulations and Procedures Affecting Access to Library Materials, Services and Facilities.

Users should not be restricted or denied access for expressing or receiving constitutionally protected speech. Users' access should not be changed without due process, including, but not limited to, formal notice and a means of appeal.

Although electronic systems may include distinct property rights and security concerns, such elements may not be employed as subterfuge to deny users' access to information. Users have the right to be free of unreasonable limitations or conditions set by libraries, librarians, system administrators, vendors, network service providers, or others. Contracts, agreements, and licenses entered into by libraries on behalf of their users should not violate this right. Users also have a right to information, training and assistance necessary to operate the hardware and software provided by the library.

Users have both the right of confidentiality and the right of privacy. The library should uphold these rights by policy, procedure, and practice. Users should be advised, however, that because security is technically difficult to achieve, electronic transactions and files could become public.

The rights of users who are minors shall in no way be abridged.¹

Equity of Access

Electronic information, services, and networks provided directly or indirectly by the library should be equally, readily and equitably accessible to all library users. American Library Association policies oppose the charging of user fees for the provision of information services by all libraries and information services that receive their major support from public funds (50.3; 53.1.14; 60.1; 61.1). It should be the goal of all libraries to develop policies concerning access to electronic resources in light of Economic Barriers to Information Access: an Interpretation of the Library Bill of Rights and Guidelines for the Development and Implementation of Policies, Regulations and Procedures Affecting Access to Library Materials, Services and Facilities.

Information Resources and Access

Providing connections to global information, services, and networks is not the same as selecting and purchasing materials for a library collection. Determining the accuracy or authenticity of electronic information may present special problems. Some information accessed electronically may not meet a library's selection or collection development policy. It is, therefore, left to each user to determine what is appropriate. Parents and legal guardians who are concerned about their children's use of electronic resources should provide guidance to their own children.

Libraries and librarians should not deny or limit access to information available via electronic resources because of its allegedly controversial content or because of the librarian's personal beliefs or fear of confrontation. Information retrieved or utilized electronically should be considered constitutionally protected unless determined otherwise by a court with appropriate jurisdiction.

Libraries, acting within their mission and objectives, must support access to information on all subjects that serve the needs or interests of each user, regardless of the user's age or the content of the material. Libraries have an obligation to provide access to government information available in electronic format. Libraries and librarians should not deny access to information solely on the grounds that it is perceived to lack value.

In order to prevent the loss of information, and to preserve the cultural record, libraries may need to expand their selection or collection development policies to ensure preservation, in appropriate formats, of information obtained electronically.

Electronic resources provide unprecedented opportunities to expand the scope of information available to users. Libraries and librarians should provide access to information presenting all points of view. The provision of access does not imply sponsorship or endorsement. These principles pertain to electronic resources no less than they do to the more traditional sources of information in libraries.²
